ordered tags.
trailing slash is light grey.
recent/popular tags
all tags

Maybe "where" goes here?
Sort

- recent tags entries have pull-out menus to let you chain popular tags together
- Every GUI search action is reflected by equivalent search terms in search bar (discoverability)
- Not only "XOs" appear in "Who" also textual or graphical metadata where appropriate (Band name, etc)
- Perhaps license icon, as shown in the cat photo entry? An emblem might also work.
- "Where" menu includes Journal, NAND, attached USB or SD devices, etc.
- "When" pops up a calendar w/ zoom options to select a day, week, month, or year
- This is the 'list view' of your search results; SJ suggests these views be made pluggable (and that views might also have different default searches). This could make GCompris very happy.
