Kiwi PyCon 2010 - Call for Talks, Papers and Tutorials

Kiwi PyCon 2010 is an independent, community-run, community-controlled and not-for-profit conference dedicated to the Python programming language, Python applications, toolkits and frameworks. It also features social events and a chance to meet fellow Python users. It is organised by the New Zealand Python User Group http://nzpug.org.

Kiwi PyCon 2010 will be taking place in Paihia in the beautiful Bay of Islands on the week end from the 20th through 21st November 2010. We are looking for Talks, Tutorials, Lightning Talks, Demos, Open Spaces and lots of hallway interaction. For the first three, please visit our submissions page http://nz.pycon.org/submittalk.

We're looking for proposals on all aspects of Python - programming from novice to advanced levels; applications and frameworks, or how you have been involved in introducing Python into your organisation.

Instructions for Presenters

We will accept a broad range of presentations, from reports on academic and commercial projects to tutorials and case studies. As long as the presentation is interesting and potentially useful to the Python community, it will be considered for inclusion in the programme. It's easy ... Can you show the conference-goers something new and useful? Can you show attendees how to: Use a module? Explore a Python language feature? Package an application?

All presentations (talks and tutorials) should be accompanied by written material (handouts or a full paper). This can be a detailed article, complementing the talk – your slides merely illustrate your verbal presentation. At the minimum we request a single page handout, containing contact details, the talk abstract and links/references for further information.

We will accept the following types of presentations:

- Lightning Talks/Quick Fire Demo (5 minutes) –
 You don't need to submit a proposal for a Lightning
 Talk. These will be organised at the conference.
 Instructions will be given on the first day.
 (Lightning Talks are brief talks that focus on a
 single example, idea, project or technique.
 Lightning Talks are not expected to cover all
 aspects of the subject. They're an excellent forum
 for first-time speakers.)
- Standard (30 minutes) This is the preferred format. 20 minutes for talking and 5 minutes for questions (with 5 minutes spare for set-up and take-down). This is enough time to cover a few issues well and allows us to provide a good selection of talks throughout the day.
- Extended (45 or 60 minutes) Extended talks are ideal for experienced speakers who want to cover a larger topic. 45 minutes for talking and 10 minutes for questions (with 5 minutes spare for setup and take-down).

If you choose the longer time slot please include that in your proposal.

Submission

Proposals should be succinct summaries containing the following information:

- Author name(s), and a bit of bio info (include a bit about your qualifications regarding your presentation topic)
- · Contact Information
- · Preferred timeslot (standard or extended)
- · Title of proposed presentation
- Summary of proposed presentation (around 30 words)
- Presentation outline (around 200 words)
- Intended audience (topic/category; some keywords; knowledge level: beginner, medium or advanced)

Don't panic! We don't require you to have written the technology that you want to talk about. If you use something in your day to day life, and you think that other people might benefit from using it, then feel free to propose a talk on it.

Submit your proposal: http://nz.pycon.org/submit-talk

If your proposal is accepted, you have the option of including a **companion paper** along with your presentation. The paper will get published in <u>The Python Paper Monograph</u> series http://pythonpapers.org. We suggest, but do not require, that authors place their papers under the Creative Commons license.

Important Dates

- Submission deadline of proposals: SUN, 2 August 2010 (But the sooner the better!)
- Acceptance notification: SUN, 9 August 2010
- Deadline for handouts/camera ready paper SUN, 17 October 2010
- The Event: 20–21 November 2010

Kiwi PyCon 2010 - Call for Talks, Papers and Tutorials

Proposals Acceptance

All proposals will be reviewed. Authors will be notified of the acceptance of their proposal by the proposal acceptance date. Obviously we'd love to accept as many proposals as we can, but we only have a certain number of sessions to fill. If you require faster confirmation of acceptance (for example, because you are travelling from overseas and require extra time to make arrangements) please communicate this to the committee when submitting your proposal.

(Final) Handout or Paper Submission

All presenters are required to submit their accompanying material by the specified date. This submission is to be either a *full paper* (not a draft), or a *single page handout*.

A handout is to aid as mental support for the topic and should contain contact details, the talk abstract and links/references for further information. In contrast, a paper should contain all of the usual aspects, such as an abstract, introduction, body and conclusion. Please ensure that this submission has had its grammar and spelling corrected and that code snippets work. Your paper allows attendees who attended your talk a chance to refresh their memories about your presentation, and gives attendees who missed your talk a chance to learn from you anyway. Make sure your paper includes - at the very least - a brief introduction to your subject material and a list of further resources.

We would prefer that papers for standard length talks (30 minutes) be no more than 5 A4 pages of 11-point type with reasonable margins and papers for long talks (45 or 60 minutes) be no more than 10 pages. Appropriate file formats include any file that can be read with Open Office (which includes plain text and HTML with minimal mark-up) or a PDF viewer. Slides (even those accompanied by speaker notes) will not be printed in the proceedings.

Papers from other PyCons provide a good range of sample paper layouts.

Paper Review

All papers for the proceedings will be reviewed. The purpose of review is to ensure that papers are of a high quality and to aid our talk scheduling. The purpose is not to identify spelling or grammatical errors or to test code snippets, although errors may be corrected during the review if found. Obviously, we'd strongly recommend you ask a friend or colleague to give your paper a read through before you submit it.

Once your paper has been reviewed, the review results will be provided to you so that you can make the requested improvements for the published version. In case of acceptance the version to submit then is the final copy of your paper as it will appear in the conference proceedings (in The Python Paper Monograph Series http://pythonpapers.org). This is a separate process, and you will receive further information upon submitting your paper.

Topics

Suitable topics for Kiwi PyCon presentations include, but are not limited to:

- · Core Python
- Other implementations: Jython, IronPython, PyPy, and Stackless
- · Python libraries and extensions
- Python 3k
- Databases
- Documentation
- GUI Programming
- · Game Programming
- Network Programming
- Open Source Python projects
- · Packaging Issues
- Programming Tools
- · Project Best Practices
- Embedding and Extending
- · Science and Math
- Web-based Systems

Note: It's important for you meet the deadlines! Otherwise it will be impossible to manage the conference, including proceedings and other edited material. If you're having problems meeting the deadlines, please let us know as soon as possible so that we can work with you to figure it out.

Contact details

Meanwhile, if you have questions or want to suggest another conference event, please contact the organisers: kiwipycon@nzpug.org
